DETAILED ACTION

Specification

The first sentence of the specification requires a cross-reference to the counterpart PCT application; see 37 CFR 1.78 and MPEP § 201.11.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear how amino acids, or its derivatives are prepared when R⁴ can be a heterocyclic group.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-6 are rejected under 35 U.S.C. 102(a) as being anticipated by Li et al., Journal of organometallics 665 (2003) 250-257.

Art Unit: 1621

The rejected claims cover a process for producing an optically active β -amino acid derivative of the formula (2):

which comprises reacting an α,β -unsaturated carboxylic acid derivative of the formula (1):

with an amine or a salt thereof, in the presence of a chiral catalyst and in the presence or absence of an acid.

The claims also cover the following compounds and preparation thereof, using a process of the instant invention:

See definitions in the claims

Art Unit: 1621

With regard to the above embodiments, Li teaches the following process conducted with diphosphine ligands

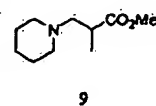

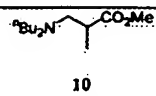

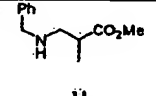

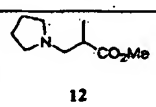

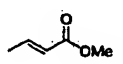

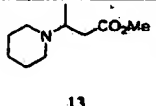

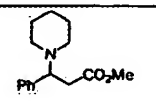

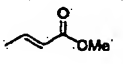

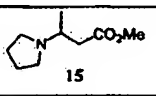

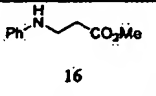

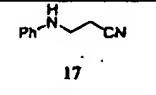

Scheme 1. Hydroamination of an olefin.

See page 251.

Specifically, the process is done in reference with the following amines and unsaturated carboxylic acid derivatives of the following table 2:

Art Unit: 1621

Entry	Catalyst	Alkene	Amine	Product	T/°C	Yield (%)
1	2a				rt	88
2	2b				rt	69
3	2c				rt	86
4	2d				rt	61
5	2a		^t BuNH ₂		100	32 44 ^b

See page 254, specifically, entries 1-7 and 11.

The examiner notes that compound 11 anticipates the compounds of claim 6.
